This document shows every hierarchal level you may have headings in a document. The class options chosen are `article`, which condenses the space used by chapter headings, and `openany`, which allows chapters to begin on any new page—usually they open only on right-side (or *recto*) pages.

To change how deep the numbers go, use the command `\maxsecnumdepth{}`. For example, to number section headings all the way down to the subsubsection level, I could use the command `\maxsecnumdepth{subsubsection}`. The default is to number only chapters and sections (`\maxsecnumdepth{section}`).

If you want the Table of Contents to include more of the document structure hierarchy, use the `maxtocdepth` command in a similar way; the default is `\maxtocdepth{section}`

Part I

Document structure hierarchy

1 Chapter

Top level of text. . .

Starred form

Any of these commands may be used with an asterisk (eg `\chapter*{Starred form}`) to omit its number.
