Some other basic environments

The `verse` environment

For writing verse or poetry. Separate lines with the newline command (\\)
and stanzas with a blank line, the same as for separating paragraphs in
text.

> The verse environment is for poetry. Lines which wrap are
> *out*dented.
> This is because individual lines are important
> Because it's for poetry!
>
> The verse environment is for poetry. Lines which wrap are
> *out*dented.
> This is because individual lines are important
> Because it's for poetry!

The `quote` environment

> The quote environment does not indent its paragraphs, but it
> does separate them with space. The quote environment does not
> indent its paragraphs, but it does separate them with space.
>
> The quote environment does not indent its paragraphs, but it
> does separate them with space. The quote environment does not
> indent its paragraphs, but it does separate them with space.

The `quotation` environment

> The quotation environment *does* indent its paragraphs. The
> quotation environment *does* indent its paragraphs. The quota-
> tion environment *does* indent its paragraphs.
> The quotation environment *does* indent its paragraphs. The
> quotation environment *does* indent its paragraphs. The quota-
> tion environment *does* indent its paragraphs.

The different environments for quotations are very similar. I would recom-
mend you choose one and run with it rather than mixing the two in a single
document.

The `verbatim` environment

This environment is for displaying literal TEX code source. It has some improvements in the memoir class, based on the verbatim package.

```
% An example document
\documentclass[article]{memoir}
\begin{document}
Hello world.
\end{document}
```
